

How to use my code to simulate and save data:

1. Read config.docx and configurate values for your need
2. Start Python
3. First simulation Window will pop up

4. Press the highlighted button. After that some Warning should pop up. Then it depends on quantity of persons and their trips should pop up the second window

Simulation started with time: 0.00.

Warning: Ignoring vehicle type 'motorcycle' when performing intermodal routing because it is not allowed on the start edge '887382265#3'.

* Type of warning that can be in 1st Window

5. Then press the same button as in 1st Window to start 2nd simulation. And after that 1st Simulation window must be closed or nothing will work
