

In first scenario I would like to simulate life of 200 people in period of 10 days. Also there are going to be 400 cars, that was simulated just to create traffic.

We`re configuring such things:

1. Our autos list ('bicycle', 'motorcycle', 'passenger')
2. We`re setting variable quantity = 200
3. We`re setting variable quantityTrips = 40, that should be compared to +- 10
11 Days in Simulation.
4. We`re setting period in file trips.trips.xml = 125
